SUV vehicle has something to do with J. Vehicle + brightness are "remote" from each other. Vehicle is in open but "set up" to operate, + is near ~~tree~~ or among low vegetation. Wives around vehicle. AOL = "Ground plane" for electronic type

operations.

Angle, corners, etc. made for function not appearance. Attempts are made to shield it from observation from above, & it is made to look like something other than it is if seen from the ground. It is kept at a distance from all but those closely associated with it to avoid possibility of close ~~the~~ inspection by those unauthorized. Its meter, not intended for extensive movement. It goes where its needed, then stays in place while operating. Carries lot of equipment - mostly electronic in nature. Part of its purpose requires communications, initiating, monitoring & plotting. Vehicle seems to be involved with some sort of activity involving a sudden intense "very brightness," with associated loud, continuous sound & vibrations. Vehicle & source of "flash" are "remoted".
